AEROMOTIVE
Part # 11207
INSTALLATION INSTRUCTIONS

CAUTION:

Installation of this product requires detailed knowledge of automotive systems and repair procedures. We recommend that this installation be carried out by a qualified automotive technician.

Installation of this product requires handling of gasoline. Ensure you are working in a well ventilated area with an approved fire extinguisher nearby. Extinguish all open flames, prohibit smoking and eliminate all sources of ignition in the area of the vehicle before proceeding with the installation.

When installing this product, wear eye goggles and other safety apparel as needed to protect yourself from debris and sprayed gasoline.

WARNING!

The fuel system may be under pressure. Do not open the fuel system until any pressure has been relieved. Refer to the appropriate vehicle service manual for the procedure and precautions for relieving the fuel system pressure.

The enclosed Aeromotive fuel pump utilizes o-ring sealed AN-04 style inlet, outlet and impuse ports; these ports are NOT PIPE THREAD and utilize NO THREAD SEALANT.

To use this pump in your vehicle's fuel system, we strongly recommend the following:
Utilize AN-04 or 5/16" fuel lines and fittings for all connections (Call Aeromotive for availability.)
Mount the pump such that it is no more than 10 inches away from the impuse signal source.
A high capacity, 100 micron fuel filter should be installed between the fuel tank or cell and the pump inlet (Aeromotive p/n 12316).

We recommend Aeromotive fuel filter p/n 12316. Call us for info.
Failure to follow the above recommendations may result in fuel leakage, poor vehicle performance and/or decreased fuel pump life! Improper installation will void all warranties for this product!

Aeromotive system components are not legal for sale or use on emission controlled motor vehicles.

DO NOT RUN THE PUMP DRY! Excessive diaphragm wear will result if the pump runs dry.
The following steps are typical of most installations:

1. Once the engine has been allowed to cool, disconnect the negative battery cable (if equipped) and relieve the fuel system pressure.

2. Disconnect the existing pump fuel lines. Plug the open fuel line ends and remove the existing pump.

3. Find a suitable place on the vehicle chassis to mount the Aeromotive fuel pump. Make sure the location will accommodate the pump mounting bolts, will position the pump as close to the engine as possible with the impulse input port facing downwards, is clear of the exhaust, is clear of any moving suspension or drivetrain components and will keep the pump clear of road obstructions or debris.

4. Using the pump mounting bracket as a template, mark and drill two mounting holes to accept ¼” bolts. Mount the pump bracket using two ¼” bolts, nuts and lock washers.

   **Note:** Be sure to route all fuel lines clear of any moving suspension or drivetrain components, and any exhaust components! Protect fuel lines from abrasion and road obstructions or debris.

5. Install one supplied AN-04 o-ring on each of the three supplied AN-04 to 5/16” barb fittings, if not already installed. Using a small amount of lightweight oil on the o-ring to ease installation, install the fittings into the AN-04 ports on the fuel pump and tighten. If you choose to use AN-04 steel braided line in your installation obtain three AN-04 cutoff union fittings, Aeromotive p/n 15629, to install in place of the supplied barb adapters.

6. Connect the fuel tank or cell to a high capacity 100 micron filter. Connect the filter outlet to the 5/16” barb fuel pump inlet. These sections of fuel line should be as short as possible to reduce the tendencies for vapor lock, cavitation, and fuel aeration.

7. Connect the 5/16” barb fuel pump outlet to the carburetor fuel supply line.

8. Connect the impulse outlet from the engine to the 5/16” barb impulse input on the fuel pump. For the best results this line should be no longer then 10-inches, as straight as possible, and made from a thick wall rubber or rigid plastic hose.
9. Ensure that any spilled fuel and any fuel soaked shop towels are cleaned up and removed from the vicinity of the vehicle.

10. Shut the engine off. Using suitable clips and other mounting hardware, secure the newly installed fuel lines by attaching them to the vehicle chassis.

11. Test-drive the vehicle to insure proper operation and re-check the fuel system for leaks. If any leaks are found, immediately discontinue use of the vehicle and repair the leak(s)!
AEROMOTIVE, INC. LIMITED WARRANTY

This Aeromotive Product, with proof of purchase dated on or after January 1, 2003, is warranted to be free from defects in materials and workmanship for a period of one year from the original date of purchase. No warranty claim will be valid without authentic, dated proof of purchase.

This warranty is to the original retail purchaser and none other and is available directly from Aeromotive and not through any point of distribution or purchase.

If a defect is suspected, the retail purchaser must contact Aeromotive directly to discuss the problem, possible solutions and obtain a Return Goods Authorization (RGA), if deemed necessary by the company. Please call 913-647-7300 and dial option 3 for the technical service dept. All returns must be shipped freight pre-paid to the company and with valid RGA before they will be processed.

Aeromotive will examine any product returned with the proper authorization to determine if the failure resulted from a defect or from abuse, improper installation, misapplication or alteration. Aeromotive will then, at its sole discretion, return, repair or replace the product.

If any Aeromotive product is determined defective, buyer’s exclusive remedy is limited in value to the sale price of the good. In no event shall Aeromotive be liable for incidental or consequential damages.

Aeromotive expressly retains the right to make changes and improvements in any product it manufactures and sells at any time. These changes and improvements may be made without notice at any time and without any obligation to change the catalogs or printed materials.

Aeromotive expressly retains the right to discontinue at any time and without notice any Aeromotive product that it manufactures or sells.

This warranty is limited and expressly limits any implied warranty to one year from the date of the original retail purchase on all Aeromotive products.

No person, party or corporate entity other than Aeromotive shall have the right to: determine whether or not this Limited Warranty is applicable to any Aeromotive product, authorize any action whatsoever under the terms and conditions of this Limited Warranty, assume any obligation or liability of any nature whatsoever on behalf of Aeromotive under the terms and conditions of this Limited Warranty.

This Limited Warranty covers only the product itself and not the cost of installation or removal.

This Limited Warranty is in lieu of and expressly excludes any and all other warranties, expressed or implied. This Limited Warranty gives you specific legal rights, and you may also have other rights which vary from state to state.
